Custom Packaging

Our ability to provide custom packaging allows for great flexibility, while ensuring that your products are delivered to your customers in a safe, neat and organized manner. We will package items in the most efficient and cost-effective way possible, whether it's sub-packaging and labeling components, inserting dividers to prevent product from shifting or poly bagging and sealing earth materials. We also take pride in designing the overall packaging to achieve a very professional look that meets your budget target.

Many of our liquid chemicals and powders are either induction sealed, taped or shrink wrapped to further prevent leaks and spills. If requested, we can individually bag each bottle, further reducing the possibility of commingling chemicals. Our in-house certified experts review all kit configuration proposals that include chemicals to confirm that shipments will be made in accordance with the Dangerous Goods Regulations HM-126F.

Private Labeling with Your Company Logo

AquaPhoenix Education also provides private-labeling options for your kit and components. From boxes, to totes and product labels, we will give your kit a unique custom look that you can be proud of.

Our staff will work with you to source and select packaging that meets all your requirements!
