

Product Sourcing

International

By sourcing products globally, we are able to import container load quantities at very competitive prices. Deliveries are made to our Hanover, Pennsylvania facility on a regular basis where we inspect and manage inventory. Each year, we schedule several international trips to inspect facilities (India, China, etc.), spot check production lines, confirm quality standards and ensure shipping timelines are being met.

Domestic

Where our international suppliers allow for bulk quantities, our domestic suppliers offer us the flexibility to procure small quantities quickly. Strong relationships with multiple suppliers increase our ability to source products for quick order processing and custom kit production.

Manufacturing

Our in-house manufacturing and fabrication capabilities provide additional flexibility to our customers. We manufacture a wide range of chemicals and test kits for the educational market and can fabricate custom components based on your individual needs and requirements.

Let Our Experts Help!

Our experienced team of buyers and vast network of suppliers help you find quality products at the right price! Everything from art supplies to science materials!
