

Quality Control

Our entire team is committed to providing you with the highest level of quality and service. We've designed our kitting lines to incorporate one-piece flow with built-in quality checks throughout the entire kitting process. When necessary, we perform the actual experiments to be sure all of your components will work in harmony and that the outcomes will be accurate and consistent across student groups. Our goal is to exceed your expectations and those of your students.

When possible, we use clear packaging to make visual quality inspections easier. Where applicable, we use third party testing to ensure items we provide meet CPSIA requirements. Additionally, all hazardous items shipped from our facility are packaged by certified HAZMAT experts and all chemicals conform to the new SDS format as required by OSHA.

When you choose to work with us, you are getting a dedicated partner that is committed to providing a positive customer experience throughout the entire process. We pride ourselves on building a process and structure that supports long-term relationships and we welcome feedback that makes the experience even more valuable.

We Focus on Quality!

ISO 9001:2008 specifies that an organization demonstrate its ability to consistently provide product that meets customer and applicable statutory and regulatory requirements. It aims to enhance customer satisfaction through the effective application of the processes and emphasizes a focus on continual improvement.

Material Check List

- Rock & Mineral kit
- Spring Scale
