Protecting What Matters Most

Safety Program

Gas Detection and Lone Worker

Safety Operations Center (SOC)

Specially trained agents provide live 24/7 safety monitoring for your organization. They are assigned to handle gas and lone worker incidents from receipt to resolution. They follow your unique emergency response protocol, automatically activating local first responders as needed.

About

Responding quickly to safety and gas exposure incidents is critical for on-site employee safety. Blackline's technology is cloud-based, featuring GPS-enabled safety sensors and devices to connect workers to live monitoring.

Allowing Blackline's SOC agents to manage the first response gives you the ability to focus on all the other tasks on your plate while feeling reassured that if an incident occurs, their agents will respond to it efficiently, getting your employees the help they need.

Blackline's personal wearables send an alert via cellular or satellite communication to a SOC agent, who can then respond according to the response protocol created in collaboration with you, putting you in control.

Key Benefits

- Five-diamond certified response center for five years in a row
- Emergency alerts are received in the Blackline Live platform in under two seconds, and SOC Agents respond in under 60 seconds
- Individual response protocol for each customer
- Built-in communication channels to local emergency response dispatch
- Agents stay connected to the distressed worker, assuring them that help is on the way
