Electrical Safety

Work Practice Inspection

Maximize your training investment by adding an electrical compliance inspection to on-site instruction. Ideal for small to medium facilities, it provides a useful snapshot of electrical safety compliance and identifies areas for increased focus.

About

e-Hazard's electrical safety trainers have extensive field experience working around electricity and understand the dangerous nature of the work and the life-saving protection strategies available today. NFPA 70E (CSA Z462) serves as the primary standard used by e-Hazard for safe work practices related to electrical safety.

Adding this service provides the trainer a chance to evaluate the state of electrical safety within a facility and apply those insights to the training. It can also identify opportunities to improve safety measures through equipment design, policy adjustments, and PPE options.

Key Benefits

This service identifies electrical safety issues needing focus and pairs it with training to close gaps and reduce incidents and worker injuries. Features of the inspection include:

- Advance review of key electrical safety documents
- On-site arrival prior to training
- Facility tour and observation
- Discussion with one to three employees
- Briefing on findings and tailoring of training
