

Even better than before

Chromasolv™ now manufactured at advanced facilities in Muskegon, Michigan

Chromasolv™ solvents are even better than you remember. We brought the original formula developed at our plant in Seelze, Germany, to our **Honeywell Burdick & Jackson™** solvent facility in Muskegon, Michigan USA.

Our Burdick & Jackson manufacturing site is recognized as a **best-in-class, high-quality solvent purification facility** where the pioneering concept “distilled in glass” was conceived, and products such as returnable drums for bulk delivery of solvents and Honeywell LabReady™ Blends were introduced to the market.

When you're sourcing solvents, it's important to be sure that you know the product you are buying. Sometimes it can be hard to tell the difference between leading brands like **Chromasolv** and alternative competitor products: often the packaging can be misleading, and they may have similar or the same product numbers.

As part of our **Honeywell Research Chemicals Chromasolv** portfolio, we have over **166 different solvents and blends**, specially designed for use in a wide range of chromatography applications.

Only original Chromasolv products will give you the guarantee of quality and the trusted results you expect.

Chromasolv products:

- Are manufactured and quality-controlled at the leading Burdick & Jackson solvent purification facility in Muskegon, Michigan
- Are made to the original specifications that guarantee high quality
- Use the same 5-digit product number that you used in the past

For further information about Chromasolv, contact your Honeywell account manager.
